EV3 Classroom: Ultrasonic Sensor

By Sanjay and Arvind Seshan
LESSON OBJECTIVES

1. Learn about the Ultrasonic Sensor
2. Learn how to use Wait Until Ultrasonic Block
3. Learn the difference between the Wait Until Ultrasonic Block and the Ultrasonic Block
WHAT IS A SENSOR?

• A sensor lets an EV3 program measure and collect data about its surroundings

• The EV3 sensors include:
  • Color – measures color and darkness
  • Gyro – measures rotation of robot
  • Ultrasonic – measures distance to nearby surfaces
  • Touch – measures contact with surface
  • Infrared – measures IR remote’s signals

ULTRASONIC

- An ultrasonic sensor measures distance.
- You use it when you need to make sure you are a certain distance away from a target.
- The distance can be measured in inches or centimeters.
- To read the ultrasonic sensor, you use the Ultrasonic Block. To use the ultrasonic to do an action until a distance, you use “Wait Until”

The first input on all the blocks is the port number. Change this to the port (1 to 4) that the ultrasonic sensor is connected to. The default port is usually 4.
ULTRASONIC CHALLENGE 1

Challenge: Make the robot move until it is 20cm away from the wall.

Pseudocode:

Step 1: Make a new project
Step 2: Drag in a Start Moving Block
Step 3: Drag in an Ultrasonic Wait Block
Step 4: Wait Until Distance is less than 20cm
Step 5: Stop Moving
Step 6: End Program
when program starts

start moving straight: 0 at 50 % speed

wait until distance is less than (≤) 20 cm

stop moving

stop and exit program
CHALLENGE 2: USE THE FORCE TO CONTROL YOUR ROBOT!
CHALLENGE 2: PSEUDOCODE

If the robot is closer than 20cm away from your hand move backward, otherwise move forward.

Step 1: Drag a Forever Loop block from the Control tab
Step 2: Drag an If-Else block from the Control tab
Step 3: Add an Ultrasonic Compare block from the Sensors tab to the if statement

Step 4: Add a Move Steering Movement block to move straight slowly if true
Step 4: Else set a second Move Steering block to move backwards slowly if FALSE
CHALLENGE 2 SOLUTION

```
when program starts

forever

if 4 is distance > 20 cm then

start moving straight: 0 at 20 % speed

else

start moving straight: 0 at -20 % speed
```

LEARNING TO MASTER YOUR FORCE

The previous code kept the robot moving always. This version lets the robot rest if it is between 15-20 centimeters.
